## Job Titles for Electrical Engineering Technology Majors

Electrical Engineering Technology graduates are taught a balance of theory and application, with a goal of placing graduates into the electrical and electronics industry. The sound theoretical grounding has enabled many graduates to obtain advanced degrees. The practical curriculum makes the transition to industrial employment very smooth. Graduates are employed in a variety of positions including research and development, design, manufacturing, programming, management, sales, service and support. The Electrical Engineering Technology curriculum gives a solid theoretical foundation in science, mathematics, and electric circuits and devices. The student may specialize in the following areas of emphasis: computers, communications (including satellite, fiber optics, microwave and laser), control systems (including robotics), integrated circuit technology (including analog, fabrication and hardware description language) and power (including solar energy). *For information about these and other careers, please go to [www.onetonline.org/](http://www.onetonline.org/)*
